

A LatchTool Advisory

The Eleventh Hour

February 24, 2009... Frozen credit, deepening recession and an awkward stimulus package is a triple whammy. As reported, the licensee for the 12-ton compression tool backed out in November. Financially strained, they stiffed us for \$30,000 and stopped the funding of the pre-production prototype. The build will cost \$40,000 and take two-months. The money owed was to cover patent maintenance fees.

Our time is like no other: the corruption that has led to the collapse of the world banking system and disenfranchisement of the West has thrown global markets into a quandary. The massiveness of the turmoil is unparalleled.

So who knows what God will do? The Bible says God is not mocked; man reaps what he sows. As for us, I firmly believe God ordained LatchTool. He keeps bringing the right people together at the right time. While we may not always get it correct, we have not broken faith. God always supplies at the eleventh hour.

We are fast approaching our eleventh hour. A LatchTool Member was one of 9-prayer warriors to visit the Federal Reserve Bank in Manhattan on a Friday in early October. They prayed throughout the bank with open Bibles. Their admittance was unprecedented. That next Tuesday, the Feds pumped 2-trillion into the credit markets.

Why would God want LatchTool to survive? There was consensus among the prayer warriors: God wants Christians to have sources of wealth in the difficult times ahead. Our friend believes that would include LatchTool. I have long argued that LatchTool Group's Intellectual Property is a preeminent store of value.

Two articles appeared in the trade press last month: [Shrinking Hydraulics](#) appeared in OEM Off-Highway. Written by a contributing editor, the article contends LatchTool's *FastFlow*® Microhydraulics address half of the acknowledged short comings of modern hydraulics. A peer reviewed article in Flow Control Magazine; [The O-ring as \[a\] Flow Control Valve](#), introduces us technically to the flow control market, a market of valves and actuators. Last year, the fluid power and the fluid control industries tallied over \$100 billion in sales worldwide. The global design market for products and machines was over \$1 trillion.

Friends and members, we need upwards of \$10,000 to stay in the fight. This keeps patents from being abandoned and Myron solvent - At 87-years old, his genius is our most valuable asset. Consequently, The Company will sell up to 25 - \$1,000 notes to members at the same terms sold to the principals of Pervasive Technologies, a fledging private investment bank. The notes earn simple interest and convert into 1.0% of LatchTool Group ownership per \$30,000 of notes. Please call me for additional information and subscription documents. It takes less than 10% of the membership buying one note each to sustain the Company.

The memo, [Double-Action High-Bar Pump](#), outlines a complementary plan to supply demonstration units to the marketplace and keep patents intact. The Pump is a critical component of our 12-ton HydrAssembly initiative; this gambit constitutes a holding action.

I understand the timing of my request is horrific. The smart money will do nothing until lay-offs subside and businesses start spending. Yet **God is sovereign**; He is at the center of these whirling events. Jesus told his disciples a parable to show them that they should always pray and not give up. He concluded Luke 18:8 by asking, "However, when the Son of Man comes, will He find faith on the earth?"

LatchTool is our walk of faith. We have labored to make our intellectual properties fungible. [HydrAssembly](#) capitalizes on moves being made by the Obama Administration. I believe LatchTool's Intellectual Property is a God given vehicle to surmount the adversity ahead. **LatchTool's [Valve Technology](#) is radical innovation with disruptive consequences:** It will change the complexion of the world to come.

Maranatha,

[LatchTool Group](#)
